Seven Principles Mobility GmbH

Tailored IT Services

We are your partner for the operation of complex platforms, open source systems and legacy applications in a regulated environment. Digitalisation is advancing, agile methods are gradually gaining ground. How is a stable IT operation supposed to keep up there?

The lack of skilled workers and project pressure to deliver new solutions ensure that the modernisation of IT processes and IT systems is not tackled with the necessary priority. In the context of digital transformation projects, cloud architectures are replacing existing infrastructures.

But not all applications can be transferred to new technology stacks by taking a lift and shift approach. The marriage of old and new processes and IT systems increasingly increases the complexity of the IT organisation. Regulatory requirements (e.g. MA Risk), the implementation of which ties up resources and the necessary knowledge, must often first be built up or procured at great expense, make matters even more difficult.

How to ensure your **business** keeps pace with **digitalisation!**

137,000

vacancies in IT are massively slowing down the digital transformation of companies. Projects cannot be implemented as planned , employees are busy maintaining the existing IT systems and processes.*

182,000

IT professionals will retire in the next 10 years. Healthy exit management, knowledge transfer and the empowerment to also maintain, optimise and further develop legacy systems must become a part of the companies' IT strategy.*

42%

cost savings are achievable on average when business processes are digitised. In addition to the pure cost savings through digitalisation, employee satisfaction also increases, as the processes can be operated without media breaks and, in the best case, from any location. Further efficiencies can be leveraged through automation and workflows.**

We realise **tailor-made services** in a changing environment

As a medium-sized company, we have been successfully accompanying and supporting corporate groups and medium-sized businesses in extensive digitalisation projects for many years. We operate your complex, heterogeneous system platforms and IT processes as a managed service partner and ensure the stable operation of the old and new components. Our focus is on the sustainable modernisation of IT system landscapes and continuous process optimisation.

across all of Europe

_process - Compliance,
ISO 9001, ISO 27001, ISAE

_Platform operations, application
management, Devops toolchains

_Holistic approach and
vision

_Complex system
landscapes

IT operations secure your core business; cost and delivery pressures, as well as the fact that resources are not always available internally as needed, force you to act on your IT responsibilities. Let us help you.
We will also be happy to take on the modernisation and operation of your complex IT platforms that are not fully documented, as well as outdated processes and historically grown IT landscapes. In such cases, you do not need to create documentation and manuals from scratch; we generate them as part of the IT takeover. We advise and support you in the implementation of regulatory and compliance requirements and increase process efficiency through automation.

Sitting on the fence is simply **not an option.** Your company's IT organisation must act
